SKILLS

Languages: JavaScript, Python, Java, C++

Frontend: React.js, Next.js, HTML, CSS

Backend: Node.js, Express.js, FastAPI, Spring Boot

Databases: MySQL, PostgreSQL, MongoDB, Redis

AI / Agentic: LangChain, LangGraph, CrewAI, RAG, Prompt Engineering, LiveKit, LLM Integration

DevOps / Cloud: Docker, Kubernetes, GCP, AWS, Hostinger, GitHub Actions, Grafana, CI/CD, Git

PROFESSIONAL EXPERIENCE

Vaiu AI

Feb 2026 – Present

AI Engineer — FastAPI, LangGraph, LiveKit, CrewAI, GCP

Remote

- Contributed to an agent builder platform where users describe an agent in plain language, answer follow-up questions, and the system auto-designs and deploys a production voice agent with full telephony integration.
- Built and deployed a statewide voice agent for Bihar Power Distribution Corporation – real-time caller number identification, intent-based routing, and multi-turn conversation context managed via LangGraph state machines.
- Designed the microservices architecture and owned Kubernetes configuration: pod autoscaling, inter-service networking, and environment-based rollouts on GCP; integrated LiveKit for low-latency audio streaming.
- Worked across the full agent lifecycle – from LangGraph pipeline design and FastAPI endpoint development to containerized deployment and cloud infrastructure management on GCP.

Alphaxine Solutions

Mar 2025 – Present

Software Engineer Intern — React, Next.js, Spring Boot, MySQL, Docker

Kolkata

- Built a production multi-tenant ERP serving **100+ employees** – payroll processing, attendance tracking, leave workflows, and holiday management with full rule-based automation across all modules.
- Delivered an end-to-end CRM pipeline: lead capture, AI-assisted lead scoring, automated follow-ups, and client onboarding; system auto-generates linked projects with employee assignments, task/bug tracking, budget, and expense reporting.
- Added vendor management for invoice, contract, and compliance document tracking; architected **400+ REST APIs** with auth, validation, and error-handling standards; improved DB query performance by **40%** via schema normalization.
- Worked in Agile sprints with regular code reviews; maintained Docker-based environments for consistent local and staging deployments across the team.

Gorjag Infotech Solutions

Jul 2025 – Sep 2025

Web Development Intern — React, Node.js, MongoDB

Remote

- Delivered **10+** full-stack modules for a platform with **20,000+ active users**; reduced page load time by **28%** through code splitting, lazy loading, and API response optimization.
- Collaborated with design and backend teams to standardize component architecture and API contracts across modules, significantly reducing integration issues.

PROJECTS

Yantrika AI – Automated Software Development Platform [GitHub]

Next.js, FastAPI, CrewAI, Docker

- SaaS platform that simulates a full software development team using multi-agent orchestration – a user submits a project idea and receives a complete PRD, system architecture, production-ready code, and a test suite, each handled by a dedicated CrewAI agent (Product Manager, Architect, Developer, QA Tester).
- Integrated Groq's Llama 3.3 70B for ultra-fast LLM inference keeping end-to-end generation under 3 seconds; JWT-based authentication, secure password hashing, clean REST API via FastAPI, fully containerized with Docker.

K8s Store Platform – Kubernetes E-Commerce Provisioner [GitHub]

React, Node.js, Helm, Kubernetes

- Built a self-service dashboard where users provision fully configured WooCommerce stores on a live Kubernetes cluster with a single UI action – no DevOps knowledge required from the end user.
- Node.js/Express backend handles provisioning requests, orchestrates per-tenant Kubernetes resources via Helm, and deploys a reusable WooCommerce and MySQL chart per namespace; zero manual kubectl steps after initial cluster setup.

DropFade – One-Time Secure File Sharing [GitHub]

Next.js, Node.js, Redis, Cloudinary

- Privacy-first file sharing platform where each upload is accessible exactly once and permanently deleted immediately after – server-side expiring-token authorization ensures direct URL access without a valid token is blocked at the API level.
- Redis caching cut file access time by **35%**; system sustained **1,200+ req/min** under load, onboarded **500+ users**, and ranked **Top 20 on ProductHunt** at launch.

EDUCATION

Institute of Engineering and Management

B.Tech in Computer Science

2023 – 2027

Kolkata
